

# INOGAM Anti-Theft System

Transporting merchandise over roads and highways is extremely common, both domestically and across borders. The cargo can be very valuable, attracting the attention of the mal-intentioned.

Drivers frequently pass through, wait in, or rest in insecure areas. It is during these times that vehicles are broken into and cargo stolen.

## The solution

INOGAM bodies with hinged doors can be equipped to prohibit break-ins. The CHEREAU anti-theft system is mounted entirely beneath the body, making the padlock inaccessible to tools generally used for break-ins (bolt cutters, disc grinders, crowbars, etc.).

The mechanism is shielded to avoid attracting attention and protect the lock from road and docking impacts. The doors are locked using a commercially available "sliding" type padlock.

## The benefits

- Shielded
- Inaccessible to tools
- Can be retrofitted on all INOGAM bodies
- Protected from abrasion during docking manoeuvres
- Does not affect casement bolts
- Uses commercially available padlock.
